Configurations for Slackware-related scripts

These are what I use on my Slackware machines.

getslack

dot-getslack

```
# repo selection
RSYNCURLROOT="mirrors.kernel.org::slackware/"
#RSYNCURLROOT="slackware.nl::mirrors/slackware/"
#RSYNCURLROOT="us.slackware.nl::mirrors/slackware/"
# fix it here
SLACKROOT="/home/share/slackware"
# allow VERS to be overridden at command line
VERS=${VERS:="15.0"}
# include info for extra packages
INCLUDES="$INCLUDES --include=extra/ --include=extra/PACKAGES.TXT"
#INCLUDES="$INCLUDES --include=extra/fltk/"
# exclude non-essentials
EXCLUDES="$EXCLUDES --exclude=extra/*"
# exclude non-standard
